VER Testing **Visual Evoked Potential Testing**

The VER is used to test the function of the specific sensory systems and their brain connections. VER testing involves EEG Recording along with different types of stimulation.

Visual Evoked Responses (VERs) test the visual systems. You will look at the checkerboard patterns on a TV screen during recording brainwaves.

How to prepare for a VER:

- Please wash and dry hair thoroughly. Do not use hair products of any kind. **Any weave, hair extensions or wigs MUST be removed prior to appointment.**
- Take all medications as normal. Bring medication list to test.
- Eat a regular meal prior to the test.
- If you wear glasses or contacts, please bring them with you to the test
- Please arrive on time
