

Autonomic Testing Medication Instructions : The listed medications below are medications that can affect Autonomic Studies and may hinder you from getting accurate results of your testing. Not all medications are listed and need to be discussed with your ordering provider before this test can be scheduled. All drugs that can affect your sweat, heart rate and blood pressure should be addressed by the ordering provider. We cannot give you advice as to the safety of discontinuing your medications. **These medications must be verified with the prescribing provider's approval and instructions before stopping.** The number of days or doses needed to be stopped prior to testing is indicated in the column next to the medication name. **If these medications are not stopped at the time of your appointment you may be asked to reschedule your appointment.** If any of the listed medications cannot be stopped, please notify the provider that ordered this test before continuing with the Autonomic Testing as this may prevent getting accurate results and they may tell you not to move forward with this test. There may also be other medications not listed that the ordering provider has requested you to hold, if so please follow your provider's instructions and let the tech know when you arrive to your appointment. Also note all over the counter cold and allergy medications should be stopped 3 days prior to testing.
